## ABOVE GROUND SUMP

Above ground sums serve as elevated pedestals designed to support fuel dispensers while housing under-dispenser containment (UDC) systems. These self-contained units are especially popular in locations where in-ground containment isn't feasible—such as docks, marinas, or waterfront fueling stations—but are equally effective for land-based applications where above-ground solutions are preferred.

## SHEER VALVE CROSS BRACE AND MOUNTING BRACKET

Shear Valve Cross Brace and Mounting Bracket is a heavy-duty anchor that securely fastens a shear valve to the sump beneath a fuel dispenser. Made from durable, coated metal to withstand harsh conditions, our bracket is a vital, reliable safety component designed to protect your station and meet essential safety regulations. This bracket is a crucial add-on item for both our above-ground and below-ground containment sums.
